# SAFETY PLAN ABC Quarry

## Health and Safety Policy

(Safety Policy can be laminated and displayed at the site)

## **Health & Safety Policy**

We are committed to providing a healthy and safe place for all workers. We will take all reasonable actions to prevent illness and injury to workers by:

- Addressing training needs in the use of safe work procedures
- Supplying proper supervision and enforcement of safe work procedures
- Supporting injured workers so that they can rehabilitate and return to work as soon as practicable and reasonable

We will consult and provide opportunities for worker participation
We will ensure that everyone at our quarry is aware of their responsibility
to contribute to a healthy and safe workplace.

 Manager	Date	-

## Responsibilities

## **Quarry Manager**

- Ensure, as far as is reasonably practicable, the health and safety of all workers
- Develop, document, implement, and maintain a health and safety
  management system that enables compliance with the Health and Safety at
  Work Act 2015 (HSAWA) and the Health and Safety at Work (Mining and
  Quarrying Operations) Regulations 2016 (HSAWR),including 2022
  amendments.
- Identify all hazards and ensure there are controls in place that reduce the risk
  to as low as reasonably practicable when new tasks are carried out, new plant
  is introduced and when there is any change affecting an activity.
- Implement and maintain a management structure
- Train workers so that they are competent to perform their duties
- Provide for adequate planning, organisation, leadership and control of operations
- Provide adequate supervision, inspection and control of operations.

(These are the responsibilities that the appointed manager has under the legislation. Appointed manager must be advised to WorkSafe)

Carry out the following checks and list other defects on the reverse side.							
Legend – record in	✓ = Standard met	<b>★</b> = action required	N/A = Not applicable to				
results column			this site				

## Operator to Initial

	M	Т	W	Т	F	S	S	Comments / Faults
Check engine and hydraulic oil levels								
Check for hydraulic leaks								
Clean or change engine air filters								
Vee-belt condition & adjustment								
Check water coolant and top up as								
Oil leaks								
Check grease nipples are working								
Check all rollers/ bearings are running								
Battery condition								
Remove loose material around belt								
Check tracking of all belts								
Check tension on screens								
Check locking pins and wedges								
Check tail drum shafts and bearings								
Ensure conveyors are free of debris								
Ensure all guards are in place								
Check for Air leaks								
Check skirting rubbers								

# **Procedure for Isolation of Plant & Equipment**

The aim of this procedure is to ensure that all energy sources that supply power to plant or equipment have been rendered safe (isolated) prior to maintenance being conducted.

This procedure covers all energy sources on site.

Electricity

Hydraulics

Batteries

Motors (diesel & petrol)

Pneumatics (air)Steam

Mobile Plant

Gravity

All worker/s that undertake any maintenance task are to isolate the equipment they are working on before commencing the task.

Each worker must install his or her own lock and personal isolation tag. The name of the worker must be written on this tag before isolation.

#### Energy sources shall be isolated as follows:

- 1. Inform all persons in the work area that maintenance is to be conducted on the equipment and it will be isolated.
- 2. Locate the MAIN SWITCH, VALVE OR KEY of the energy source (always isolate the main switch as some stop / start devices do not provide adequate protection).
- 3. Turn the energy source completely off or remove the key.
- 4. Fit your lock and personal isolation tag to the main switch or valve.
- 5. Test for zero potential (dead) go to the start button and attempt to start the equipment. If the equipment does not start on this test it is safe to start work.
- 6. When and only when the task has been completed, each worker is to remove his lock and personal isolation tag.
- 7. Locks and personal tags can only be removed by the person placing the tag. Any person who removes a lock or personal tag placed by another person faces immediate disciplinary action.
- 8. The SSE may remove a lock and personal tag placed by another person only after contacting the person who placed the tag and receiving the all clear to remove the tag.

- 9. In the event that the person who placed the tag is not contactable, the SSE will conduct a thorough examination of the plant / equipment to satisfy themselves that it is safe to remove the tag and the is safe to operate.
- 10. When all locks and tags are removed and persons accounted for, the person responsible for the task shall test the plant / equipment for safe operation.

If an inspection is to be undertaken of plant / equipment and the person completing the inspection may come into conduct with the energy source or moving parts, then the equipment must be isolated.

Worker/s are trained in isolation and issued with a copy of this procedure on induction.

#### **Out of Service Tags**

Out of Service Tags shall be placed on:

- Faulty or dangerous equipment
- Equipment that is to be kept out of service for operational reasons

Equipment that has been tagged Out of Service shall not be started or operated. An Out of Service Tag shall not be used as a substitute for a full Isolation.

#### **Do Not Operate Tags**

Do Not Operate Tags shall be placed on:

- machinery that is currently being serviced
- repaired and a risk of personnel injury
- machine damage exists if the machine is started or move

(This procedure should be followed whenever you are working on plant and machinery)

# **EMERGENCY PROCEDURE**

## In the event an emergency

#### **KEEP CALM**

# **DIAL 111**

- 1. Tell the operator which service you require and provide them with the site's details
- 2. Stop what you are doing and turn off machinery, if safe to do so
- 3. Assist any injured people if there is no danger in doing so
- 4. Barricade area to restrict access and evacuate to the assembly area
- 5. Ensure all workers and visitors on site are accounted for
- 6. If possible send a person to the front gate to direct Ambulance or Emergency Services
- 7. Do not re-enter the workplace until it is safe to do so

## **SITE SAFETY RULES**

#### Thank you for visiting our site.

While you are visiting our quarry we are responsible for your health and safety. These site rules summarise the work practices that apply to our mine. The nominated company representative will read through this document with you and will discuss any issues that arise.

1.	THE PERSON RESPONSIBLE FOR YOUR SUPERVISION IS	
	A FIRST AID KIT IS LOCATED AI	ND
3.	IN THE CASE OF AN EMERGENCY, GO TO AND	ND
	YOU CAN ONLY VISIT THOSE AREAS AS DIRECTED BY THE COMPAREPRESENTATIVE	NY
	YOU MUST WEAR PERSONAL PROTECTIVE EQUIPMENT (PPE) AS INDICAT BY THE SIGNS ON SITE OR AS INDICATED BY THIS SAFETY PLAN	ED
6.	YOU MUST REPORT TOWHEN YOU ARRIVE ON SI	TE
7.	PLEASE BE AWARE OF MOBILE PLANT AT ALL TIMES	
8.	TRAFFIC WILL ABIDE BY THE SITE SPEED LIMIT, WHICH	IS
9.	IF YOU SEE ANY HAZARDS ON SITE PLEASE REPORT THEM IMMEDIATELY	то

It is a good idea to have a written set of site rules like this one to give to visitors new people to the site etc.
